

# TPC, your Polyester Destination

- Exporting Polyester Fiber and Yarn to  
over 70 countries all around the world.  
- Our total capacity of Fiber, Yarn and  
Filament is around 350,000 tons annually.

Here's a thing you have been dealing with

Low Consistency?  
Low Yarn Quality?

# No worries

- Our Zimmer,  
Nuemag and  
Barmag machines  
serve stabilities  
(top machines  
in the world)

No matter what kind of POLYESTER,  
we have it **ALL** – both Virgin and Recycled version

Partially Oriented Yarn (POY)	Fully Drawn Yarn – FDY	Draw Textured Yarn – DTY	Twisted yarn
Dope Dyed Black		Ring spun	OE spun
Polyester Staple Fiber – PSF			
<p>Is a synthetic fiber made directly from PTA &amp; MEG or PET, with various uses in the textile, automotive and furniture industries. "Staple Fiber" often refers to natural fiber such as cotton or wool.</p> <p>Product table charge</p>

## About US

Thai Polyester Company (TPC) was founded in 2001. We are a vertically integrated fiber polyester manufacturer with a total capacity of 316,800 tons per year, utilizing innovative technology worldwide. TPC is a registered company specializing in polyester yarn, fiber, and filament. We export polyester yarn to a variety of countries. We use high-tech German machine in our process.

- For raw material testing, we have 3 tanks of PTA silo

- A perfect PET flakes washing line

- 0% Carbon LNG is now processing

- Well-organised production process

- Sustainable product is one of our strength

- And we own a Spinning mill too!

Partially Oriented Yarn – POY	Fully Drawn Yarn – FDY	Draw Textured Yarn – DTY	Twisted yarn
It's produced by melting and extruding a polyester chip or flake, making directly from PTA and MEG by spinning and take-up, and it's primarily used in texturizing to create textured yarn (DTY).	It's a highly drawn and capable of producing high-strength fabrics and also known as Polyester Filament Yarn (PFY) or Spin Draw Yarn (SDY). FDY is commonly used as a weft and weave fabric, it can also be knitted and woven with other filament yarn.	Is a filament yarn with a soft crimp, a high bulky textured with a soft cottony feel, and high durability. Draw Textured Yarn (DTY) yarn is obtained when Polyester POY is simultaneously twisted & drawn.	The process by which fibers are arranged around the axis of yarn is called yarn twist. It imparts strength to the yarn.
Dope Dyed Black		Ring spun	OE spun
Is made by incorporating a masterbatch colorant into the polymer melt during the spinning or extrusion process. As a result, fully pigmented fibers and filaments emerge from the spinnerets in a single step.		Ring spinning is a method of spinning textile fibers to make a yarn. This process provides a soft desirable fabric.	Open-end spinning is a technology for creating yarn without using a spindle.
Polyester Staple Fiber – PSF			
Is a synthetic fiber made directly from PTA & MEG or PET, with various uses in the textile, automotive and furniture industries. "Staple Fiber" often refers to natural fiber such as cotton or wool. Product table charge			

Spinning mills

- High efficiency
- Yarn strength
- Low Oligomer

SEE NEXT 02/03

Knitting mills

- Dying consistency
- Dyeing ability
- Stable moisture
- Stable OPU
